

Theme	<b>Better Testing</b> <p>“QA is the bottleneck” . . . “Why does QA testing take so long?” . . . “Why are you finding so many (or so few) defects?” . . . How do you answer such questions as a test manager or test lead? When do you think the test is enough for a release? How do you know key stakeholders will read and trust your test reports instead of treat them as chart junk? If you are puzzled by those questions most of the time, then this session is for you.</p>	
Presenter	<b>Reginald Braithwaite</b> Certified SCRUM Master	<b>Tony Templeton</b> IBM Business Consulting Services
Topic Summaries	<b>Better Testing</b> This presentation will address commonly-asked questions about testing and QA. Specifically, different test approaches and their applicability will be discussed, along with measuring test coverage and identifying appropriate test metrics.	<b>QA/QC Lessons Learned</b> Can lessons from the auto industry help improve the way we test large integration projects? The topic of this presentation will be to explore what is changing in the nature of IT projects today and how this may affect the project QA/QC strategy.
Biographies	Reginald Braithwaite is a Certified Scrum Master. He has been managing software teams since 1986 and his successful software products include a suite of J2EE development tools that have generated more than thirty million dollars in sales, a classified advertising system in use across both North and South America, and in-house applications managing a four billion dollar financial services company	Tony Templeton is an Associate Partner in IBM's Technology Strategy Consulting practice. He specializes in assisting clients to resolve project delivery and software quality issues. His background lies in software development where he has held the full gamut of technical and IT managerial positions. Tony has a long standing interest in testing, and in the early 1990's co-authored IBM's Full Lifecycle Test Methodology. He has been an invited speaker at software quality conferences in North America, Europe and Asia. His specialty is in helping clients design effective test strategies for high risk projects with tight time constraints.
